

TNT Maritime Interdiction Operation Experiments: Enabling Radiation Awareness and Geographically Distributed Collaboration for Network-Centric MIO

Dr. Alex Bordetsky
Naval Postgraduate School

Dr. Arden Dougan
Lawrence Livermore National Laboratory

Dr. Foo Yu Chiann
DSTA, Singapore

Col. Andres Kilberg
Swedish Naval Warfare Center

Objectives

- Evaluate the use of networks, advanced sensors, and collaborative technology for rapid Maritime Interdiction Operations (MIO); specifically, the ability for a Boarding Party to rapidly set-up ship-to-ship communications that permit them to search for radiation and explosive sources while maintaining network connectivity with C2 organizations, and collaborating with remotely located sensor experts.
- Extend the set of participating organizations to coalition partners (currently includes international teams in Sweden, Singapore and Austria) and first responders (currently includes San Francisco, Oakland Police, and Alameda County Marine Units)
- Provide the recommendations for transforming advanced networking and collaborative technology capabilities into new operational procedures for emerging network-centric MIOs

TNT MIO Testbed: System of Networks and Collaborative Technology for Supporting Globally Distributed MIOs

Plug-and-Play Sensor-Unmanned Vehicle-Decision Maker Networking Testbed with Global Reachback

- Plug-and-play wide area adaptive network with global reach back capabilities and rapidly deployable self-forming wireless clusters (including student network operation services 24/7)
- Local networking clusters: ship-to-shore, ship-to-ship, ship-UAV-ship, ship-USV-ship, ship-AUV, sensor mesh mobile networks
- Operational focus: Boarding Parties support, MIO connectivity and collaboration for radiation awareness, biometrics identification, non-proliferation machinery parts search, and explosive materials detection on the board of the target vessel during the boarding party search phase
- Testbed backbone: NPS (Monterey), USCG (Coast Guard and Yerba Buena Island in SF Bay Area, Camp Roberts (Central California),
 - New sites: Golden Gate Bridge, Mt. Diablo, Sacramento River delta
- Global VPN reach back :
 - East Coast (BFC, DTRA)
 - Sweden (Navy site in Southern Sweden),
 - Austria (GATE site in Bavarian Alps-Salzburg Research)
 - Singapore (DSTA), and
 - Australia (DSTO), Cana-new member, first collaborative experiment in November, 2006)

Adaptive Networking at the Situational Awareness Interface Level: Network-on-Target

- The NoT process starts at the level of Situational Awareness Interface used by the local or higher echelon commander, to point onto the Target, which in this case is the site to be reached by the self-configuring network
- In response the mobile networking node, i.e. small boat, light reconnaissance vehicle, or operator are moved to the area to extend the tactical mesh
- If the site is too far, or the preceding links are about to break down, the UAV is deployed to stretch the network further to the remote most node, or to heal the overstretched intermediate link

NoT at Work : Remote and Self-Alignment of Broadband Point-to-Point Antennas

- This in turn would require rapid and frequent re-alignment, of the antenna assets including panel switching and tune-up decisions made right at the level of local commander situational awareness view
- More so, the commander's remote advisers, located thousands miles away of surveillance and targeting area would be able to see the effects of the healing assets deployment in the Situational Awareness view and assist the commander in re-aligning and stretching the mobile network to the target area

NPS

Class on Collaborative Technologies

Network Operations Center and Data Collection site via groove

Network Support team and Experiment Control (act as back up to make all necessary inject should network connectivity problems exclude certain players).

Swedish Team

Maritime Security Office of the Port of Oakland

observing and supporting experiment control by scenario injects made via groove, SA, and by video feed (with CDR Leif Hansson in Lead)

Austrian Team

Port of Hong Kong (where the containers were loaded)

observing and supporting experiment control by scenario injects made via Groove, SA, and by video feed (with Dr. Ulrich Hofmann in Lead, Ulrich Wagner as Technical POC)

Team in Singapore

Shipper of the cargo containers

observing and supporting experiment control by scenario injects made via Groove, SA, and by video feed (with Dr. Yu Chiann in Lead)

DHS Science & Technologies CounterMeasures Test Beds

Office of Emergency Services

Assists CalOES and DOE RAP

Participating Units

Alameda County Sheriff's Office Marine Patrol Unit Boat and RHIB— Boarding vessel, deploys boarding party and does drive by (carries IST detector)

Oakland Police Boat 35 the target vessel

OFT Stiletto Ship-remote early warning command post en route to San Diego area

USCG

District 11 Watch Officer

PAC Area Watch Officer

MSST Level Two capable boarding team with radiation detection equipment?

Participating Units

LLNL

Providing source, source security, and data files for detection teams (if necessary)

Providing remote analysis cell from Livermore via Groove

Provide mapping facility of bay showing critical facilities (HOPS), radiation detection reachback and atmospheric modeling reachback

LLNL Watch Officer – remote cell (operating from NPS)

2 members of Boarding Party (with radiation detectors)

BFC (Biometrics Fusion Center)

Providing data files for detection teams,

Providing remote support for exercise database search and results reporting via Groove collaborative software

SOCOM Observers

Remote Navy Asset: OFT Stiletto Ship in San Diego

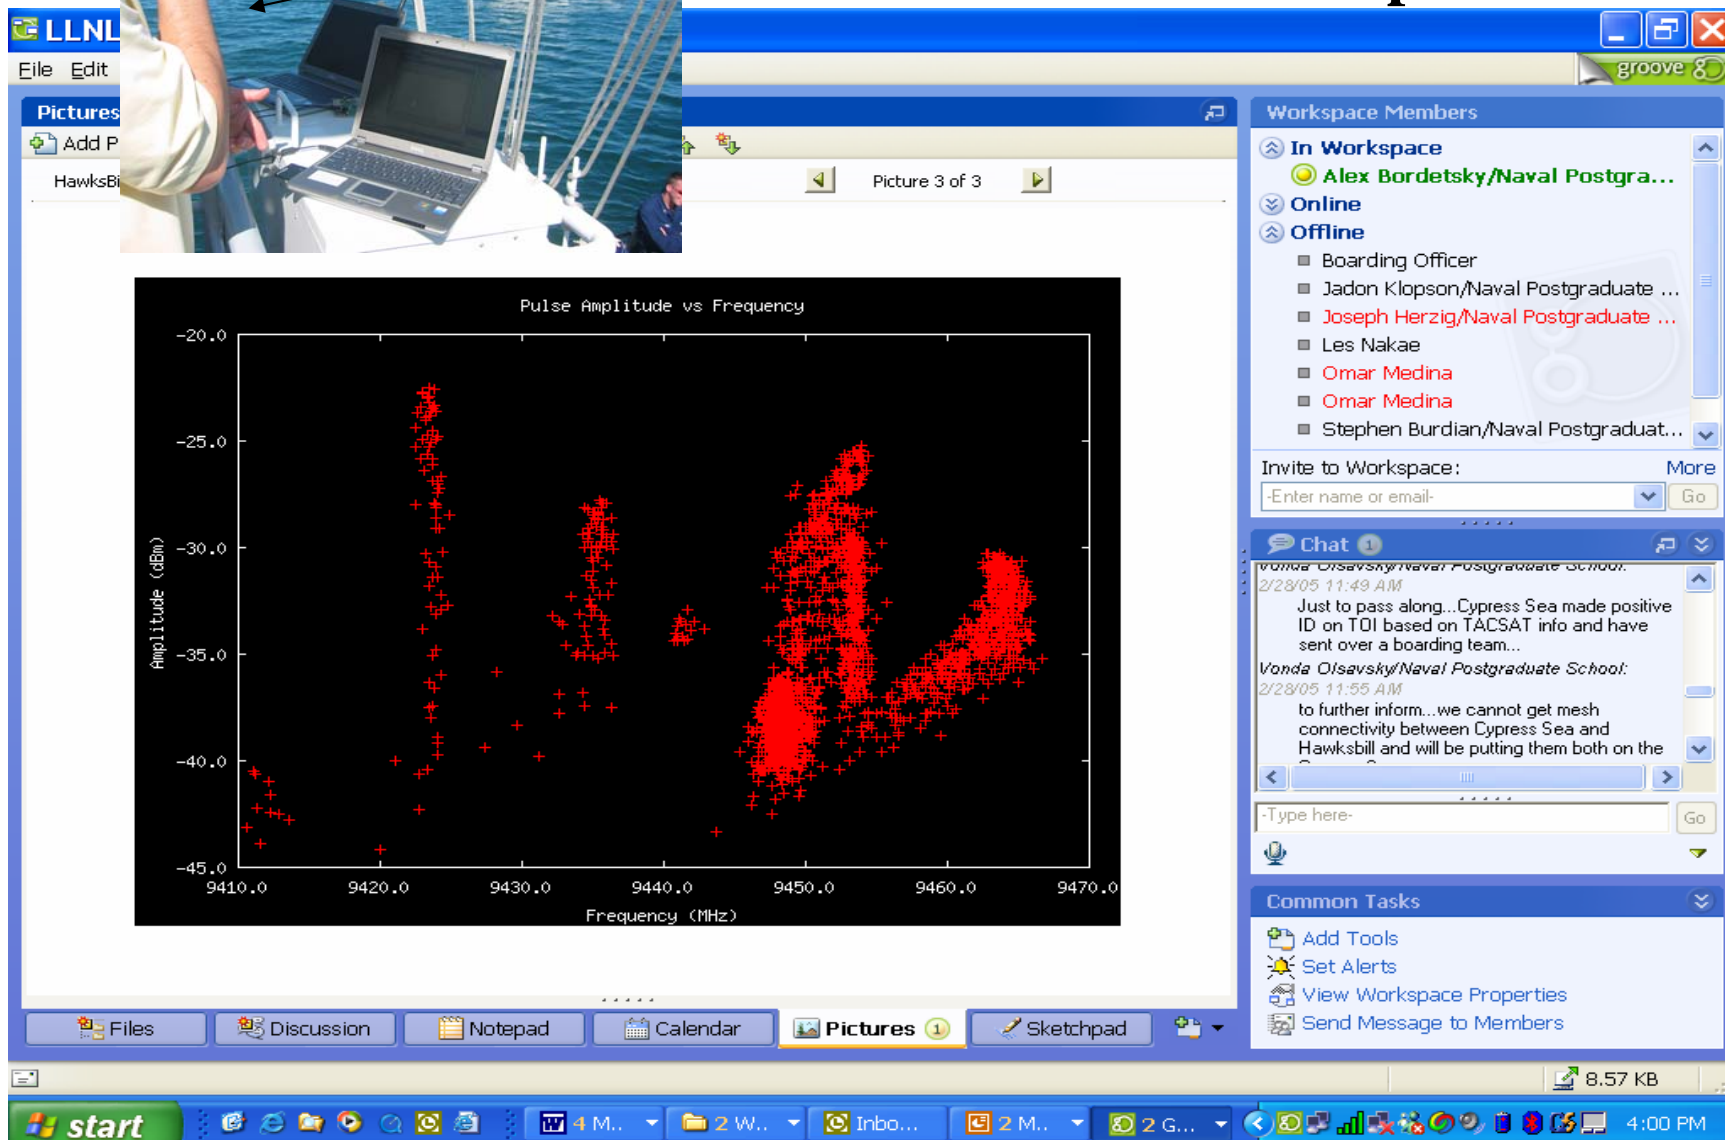

Ship-to-Ship

Ad-Hoc Mesh

Target Ship Enters Monterey Bay; Collaboration with TACSAT for Ship ID

Boarding Party Situational Understanding Development via Collaboration with Expert and Command Remote Sites

MIO 06-4 Findings

- **SAOFDM-based experimental adaptive on-demand ship-to-shore network provide expected connectivity and level of bandwidth capable of carrying on several video streams and data sharing situational awareness applications. While on the move at speeds 3-5 nm/hour and zigzag maneuvering of the Boarding Vessel trying to chase the Target, the SAOFDM node by using designed self-aligning algorithm applied via the control channel enabled to keep ship-to-shore directional link intact, providing transmission rates up to 5 Mbps.**
- **Collaborative technology (shared workspaces, SA, video tools) performed well, enabling simultaneous radiation detection and analysis taking place in different geographically distributed locations.**
- **We observed successful SA integration with early drive-by detection of radioactive source on board of truck in Bavarian Alps (upper right view), by the first time in action Stiletto ship in San Diego (lower right view) and plum detection of the boat in SF Bay (lower left view). For the first time three surface nodes and three overseas command posts (Swedish Navy, Singapore DTSA, and Austria (Salzburg Research) acted together with District 11 (CG), YBI TOC and NPS NOC.**

Tactical Network Topology Maritime Interdiction Operation Experiments: Enabling Radiation Awareness and Geographical Distributed Collaboration for Network-Centric Maritime Interdiction Operations

December 5-8, 2006

Arden Dougan

International Maritime Domain Security Symposium

TNT Maritime Interdiction Operation Test Bed

- **Tests cutting edge technology for WMD detection and communications in maritime environment**
 - Communications in harsh environments, between moving ships at sea
 - Netcentric collaboration with global partners
 - Situational Awareness
 - Scenario-based

Drive-By Radiation Detector: ARAM – Adaptable Radiation Area Monitor

- Real time radiation monitoring system
- Spectral data analyzed to quickly provide actionable information
 - flow of commerce not impeded
 - secondary search possibly not necessary

Radiation Sources used in TNT

- **Naturally occurring radioactive materials (NORM)**
 - Radium smoke detector
 - Thorium lantern mantles
 - Calibration Sources
 - Moisture gauge
- **Surrogates**
 - Fiestaware
 - Uranium-238
 - Plutonium surrogate

Surrogate Radiation Sources used to simulate special nuclear materials

- **Plutonium surrogate**
 - Mimics Pu for 1st response detectors
 - DOT Limited and Excepted Quantity for easy transport
 - Field life 2-3 months (renewable)

Explosives detection kit - ELITE

- Colorimetric explosives detection system
- Simple to use swipe test, immediate results, requires little training
- Detects over 25 explosives and their precursors
- Low nanogram detection limits
- Swipes and tests potentially contaminated areas
- Enables easy detection of color change

LITE detects:

- ***nitro aromatics (including TATB)***
- ***nitrate-esters***
- ***nitramines***
- ***picric acid***
- ***inorganic nitrate compounds***

- Small, disposable, one use system
- Easy to use, no training required
- Minimized heating requirements
- Uses a swipe material for improved sampling
- Inexpensive to manufacture
- Detects aromatic, aliphatic, and nitrate explosives
- Utilizes three types of chemical reactions
 - Meisenheimer complex
 - Griess Reagent
 - Zinc reduction of nitrates

- **Radiation Experts**
 - Analyze radiation spectra
 - Determine quality of data
 - Ask for additional information (background spectra, photos)
- **Consequence Analysts**
 - Plume modeling
 - Access to maps, atmospheric modeling, hazardous chemicals database
- **Export Control Experts**
 - Analyze photos of items
- **Emergency Response Coordinators**
 - Advanced planning (direct movement of ships, area vulnerabilities, etc.)

Examples of Radiation Reachback

Who: unknown

What: A truck loaded with an cargo container

When: A time ago (exact time unknown)

Where: Entrance into the Hong Kong seaport

How: Portal monitor

Specials: No neutrons observed, just gamma radiation

Radiation Alarm

Hong Kong Border

There is one item that was added to CalMart's shipment, not normally part of their shipment. This item is sent by George Koncher to the "Citizens Against Nuclear Things."

Plume Modeling

Request worst case scenario for vessel carrying materials listed above.

Current location is 37-47.04N 122-21.28W. winds from SW

The TNT MIO Node in Singapore

Dr Foo Yu Chiann

Project Manager

Defence Science and Technology Agency

Experiment Set-up

- 3 wireless laptops connected via 802.11g to the Internet
- Location:

- The Singapore node is connected to the MIO collaborative environment through a Virtual Private Network (VPN) established between DSTA and NPS.

Video Feeds

Stiletto

Boarding Vessel

TOC

Sweden

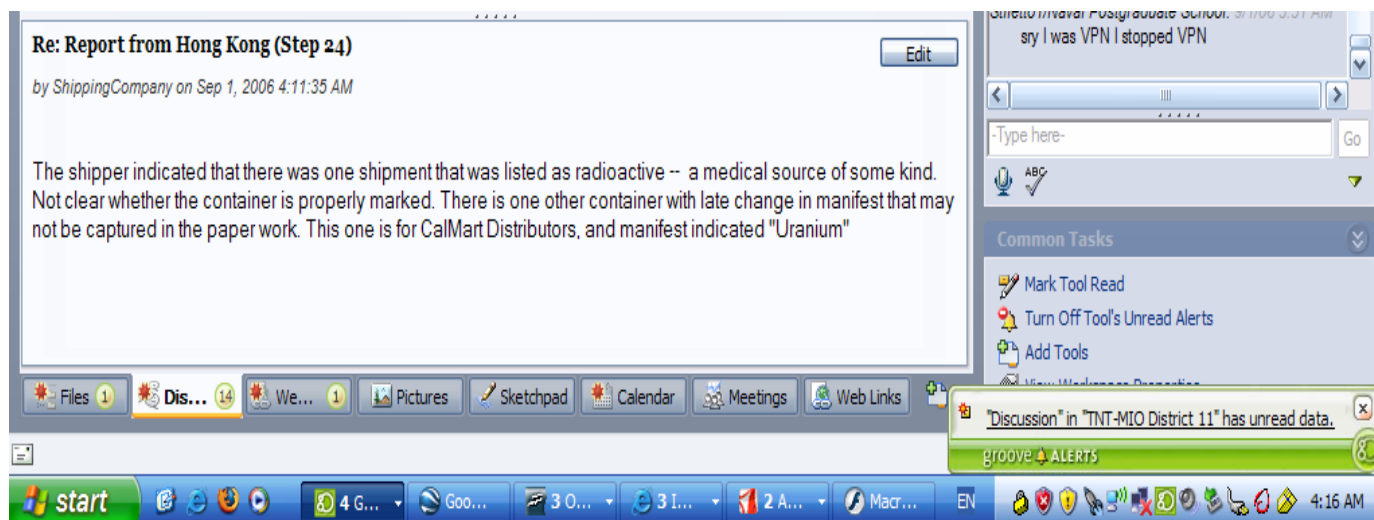

Austria

Role for MIO-06

- Singapore played the role of the shipping company that had unknowingly transported the radioactive cargo (via Port of Hong Kong) as part of its shipment
- Provided the shipping manifest of the cargo containers to Port of Hong Kong and MIFC to aid investigations

Observations

- The Experiments have provided insights on the possible new operational capabilities that could be achieved with collaborative networking
 - Allow boarding team immediate access to remote expertise during boarding operations
 - Shorten decision-making processes
- Way ahead
 - Explore how such collaborative technologies could be applied for our own operations

FÖRSVARSMAKTEN
SJÖSTRIDSSKOLAN

A collage of military technology. At the top, a helicopter flies against a cloudy sky. Below it, a soldier is shown from the chest up, wearing a helmet and looking at a computer monitor. To the left, a tall radar or sensor tower stands on a rocky outcrop. In the foreground, a tank is positioned on a flat surface. To the right, a large naval ship is visible on the water. The entire image has a blue and grey color scheme with a hazy, atmospheric background.

Integrated sensor systems for soldiers

Sensor and communication jacket

**Demonstration vest developed in collaboration
with Combitech and the University of Umeå**

Sensor and communication jacket

Key features:

- Real time communication of voice, data and sensor information
- Integrated in the combat suit (jacket)
- Adapt sensors to the specific mission/task
- Possibility to supervise physiological status and position of the soldier
- Presentation of alarm and data to the soldier (MMI)

Sensor and communication jacket
